

Sweeper™ Executive Summary

Sweeper™ is a developing hybrid operational continuity platform positioned to support visibility, coordination, workflow resilience and operational awareness across both connected and low-connectivity environments. The concept combines modular dashboards, operational interfaces and pilot-ready workflow structures designed for construction, infrastructure, institutional and field-based operational environments.

Core Positioning

Sweeper™ is intended to function as a practical operational continuity layer capable of supporting project visibility, coordination and workflow execution in environments where uninterrupted connectivity cannot always be guaranteed. The platform is positioned around several key principles:

Area	Purpose
Operational Visibility	Improve awareness of projects, workflows, tasks and rep
Hybrid Continuity	Support workflows across online and offline conditions.
Compliance Awareness	Provide visibility into operational, safety and access-rela
Modular Architecture	Adaptable to different industries and operational require
Pilot Readiness	Suitable for controlled demonstrations and proof-of-conc

Potential Use Cases

- Construction and quantity surveying operations
- Infrastructure and utility coordination
- Campus and institutional workflow management
- Compliance and operational signalling environments
- Remote and low-connectivity field operations
- Dashboard-driven operational intelligence and reporting

Current Assets

The current Sweeper™ demonstration ecosystem includes:

- Interactive HTML-based platform demonstrations
- Industry-specific pilot concepts and use-case structures
- Construction and BOQ-oriented workflow concepts
- Operational visibility and dashboard interfaces
- Executive proposal and pilot engagement material

Pilot Engagement Approach

Sweeper™ is currently positioned for pilot-oriented engagement discussions. A proposed pilot would evaluate whether the platform can improve visibility, continuity and coordination within a selected operational environment. Potential pilot engagements may include:

- Controlled proof-of-concept demonstrations
- Workflow and dashboard customization
- Operational observations and KPI discussions
- Co-development and institutional collaboration opportunities

Future Vision

The long-term vision for Sweeper™ is to evolve into a modular operational continuity ecosystem supporting distributed teams, operational intelligence, workflow coordination and AI-assisted reporting across multiple industries. The platform is intended to remain adaptable, scalable and suitable for evolving operational environments.
